
Installation guide: Test-Data-Input widget (TDI)

- The whole **source code** of the **TDI** via **github** has to be downloaded.
- The folder TestDataInput must be **copied** into **.../mjoelnir/advisor/widgets/**.
- The file **db.connect.php** must be loaded into **.../mjoelnir/advisor/core/php/** and be **replaced**.
- The file **mysql.class.php** must be loaded into **.../mjoelnir/advisor/core/php/db/** and be **replaced**.
- At the moment, only **six test data files per test building** are existing -> if more test data files will be needed, the whole test data set can be downloaded at <https://sourceforge.net/projects/greend/files/>. A test data file of **building x** can be loaded into **.../mjoelnir/advisor/widgets/test_data_files/building x/**.
- This widget works well, by using **Google Chrome**, and **Full-HD**.
- This widget can be **only** used by a **system admin**.
- If there are any **questions**, or **problems**, please contact me via mawasche@edu.aau.at!!!
